Artificial Intelligence (AI) and Ethics
Think Critically and Use Common Sense

1. You are the Creator of Your Own Work

Even with the availability of AI tools, you remain the author of your work. This includes text, illustrations, images, formulas, or code.

2. Collaborate Ethically

It's okay to use AI as a collaboration partner, as working together can improve your skills. Does the AI tool provide ideas that are new to you? Double-check and evaluate them based on reliable sources.

3. Ensure AI Accuracy

Just like any other tool, you are responsible for ensuring AI tools work correctly. Remember, AI can make mistakes just like any other tool.

4. AI as a Discussion Partner

AI can be helpful for discussions and brainstorming ideas. But don't rely on AI more than you would trust advice from friends or family. AI can still make errors.

5. Make Informed Choices

Consider what you hope to achieve with AI tools. Are you looking for a shortcut, or genuine support for your work and learning?

6. Verify Information

As the author, you have a responsibility to ensure the accuracy of your work. Don't assume AI tools are always correct; they may very well hallucinate and generate false information.

7. Be Critical of Information

Be cautious with information and assistance from AI tools. Many AI tools base their answers on available data, which may not always be accurate. Verify any information you receive.

8. Check AI-Generated Content

AI-based tools are not so different from other digital tools. Remember that any academic content generated must be checked against a credible source.

YOUR WORK - YOUR RESPONSIBILITY!
